

Figure 1 is a Kaplan-Meier survival plot showing the probability of survival over time (days) for two groups: OS (blue solid line) and EFS (orange dashed line). The y-axis represents the probability of survival, ranging from 0.00 to 1.00. The x-axis represents time in days, ranging from 0 to 4000. The OS curve starts at 1.00 and drops to approximately 0.15 by day 1000. The EFS curve starts at 1.00 and drops to 0.00 by day 1500. The plot includes a legend indicating OS P = 0.406 and EFS P = 0.816.

	0	500	1000	1500	2000	2500	3000	3500	4000
OS:no CPG P/LP	22	6	1	1	0	0	0	0	0
OS:CPG P/LP	6	3	1	0	0	0	0	0	0
EFS:no CPG P/LP	22	3	0	0	0	0	0	0	0
EFS:CPG P/LP	6	1	1	0	0	0	0	0	0
