

Figure 10 is a line graph showing the probability of a node being in the OS state (blue line) and the EFS state (orange line) over time (days). The x-axis represents Time (days) from 0 to 4000. The y-axis represents probability from 0.00 to 1.00. The OS probability starts at 1.00 and drops sharply to 0.388 at approximately 600 days. The EFS probability starts at 1.00 and drops to 0.50 at approximately 1500 days, remaining at 0.50 until approximately 3500 days, where it drops to 0.00. The plot includes a legend indicating OS P = 1 and EFS P = 0.388.
